React Router DOM	C++	Node js
Express js	Mongo DB	Python
Core Java		

Projects

Real Estate (Mern Stack)

Developed a feature-rich real estate application using the MERN stack with a well-maintained and modular project structure. Key highlights include:

- State management with Redux and seamless navigation using React Router DOM.
- Leveraged React hooks for efficient and reusable components.
- Integrated a payment gateway for secure transactions.
- Admin dashboard for managing properties and users.
- Gmail-based email verification for user accounts.
- Full authentication and authorization with secure APIs.

This project demonstrates proficiency in building scalable, maintainable, and user-friendly web applications using modern web development technologies.

Movie Search App

<https://funny-genie-9673a0.netlify.app/>

- Developed a dynamic movie app with HTML, CSS, JavaScript, and React, ensuring seamless browsing.
- Incorporated search functionality for users to find movies by name, while utilizing React Router DOM for efficient routing.
- Leveraged React for state management and component-based architecture, alongside APIs for dynamic movie data, ensuring up-to-date information.

Landing Page For Startup Growth Progress Tool Company

<https://stellular-crostata-8473f5.netlify.app/>

- Designed and implemented a sleek, professional user interface resembling Growth website's style and functionality, ensuring responsiveness across devices.
- Utilized HTML for semantic content structuring, CSS for styling/layout, and JavaScript for interactivity
- Integrated modern web design principles, including intuitive navigation and visually appealing typography, alongside CSS media queries for adaptive layout across various screen sizes/resolutions.

Hospital Management System (MERN Stack)

- Utilized React hooks for building efficient, dynamic, and reusable components across the application.
- Role-based authentication and authorization, ensuring secure access for admins, doctors, staff, and patients.
- Gmail-based email verification and OTP system for secure patient and staff account creation.
- Integrated payment gateway for handling patient billing and transactions securely.
- Developed RESTful APIs with Express.js and MongoDB, following best practices for backend security and data handling.
